

Claims

1. A method for prevention and treatment of kidney diseases which comprises administering a composition for prevention and treatment of kidney diseases containing a PAR-2 activating agent as an effective ingredient to a patient suffering from kidney diseases.

2. The method according to claim 1, wherein the kidney diseases are primary and secondary kidney diseases.

3. The method according to claim 1, wherein the kidney diseases are primary diseases.

4. The method according to claim 1, wherein the primary diseases are rapidly progressive glomerulo nephritis syndrome or crescentic (extratubal) glomerulo nephritis.

5. The method according to claim 1, wherein the activator for PAR-2 is PAR-2 ligand, PAR-2 ligand derivative, trypsin, tryptase, tissue factor/VIIa factor, Xa factor, acrosin or trypsin-like serine protease.

6. A method for screening an effective ingredient for prevention and treatment of kidney diseases which comprises screening an activating action of a test substance for PAR-2.
